All information contained within this brochure. Therefore, please consult with your Forest River dealer and including prices, colors, materials, equipment and specifications as well as adequate trailer brakes. Please refer to the Operator’s Manual of your vehicle for further towing information.

**Estimated average based on standard build optional equipment.**

- GWR (Gross Vehicle Weight Rating) - is the maximum permissible weight of the unit when fully loaded. It includes all weights, inclusive of all fluids, occupants, cargo, optional equipment and accessories. For safety and product performance do NOT exceed the GWR.
- GCWR (Gross Combined Weight Rating) - is the maximum permissible loaded weight of your motor home and any towed trailer or towed vehicle. Actual GCWR of this vehicle may be limited by the sum of the GWR and the installed hitch receiver maximum capacity rating; see hitch rating label for detail.
- CCC (Cashmere Weight Rating) - is the maximum permissible weight, including cargo, fluids, optional equipment and accessories that can be safely supported by each axle.
- UVW (Unloaded Vehicle Weight) - is the weight of the unit as manufactured at the factory. It includes all weight at the unit’s axle(s), including full fuel, all fluids and LP Gas. The UVW does not include cargo, fresh potable water, additional optional equipment or dealer installed accessories.

*Estimated average based on standard build optional equipment.
- CCC (Cashmere Carrying Capacity)** - is the amount of weight available for fresh potable water, cargo, passengers, additional optional equipment and accessories. CCC is equal to GWR minus UVW. Available CCC should accommodate fresh potable water (5.1 lbs per gallon). Before filling the fresh water tank, empty the black and gray tanks to provide for more cargo capacity.

**Estimated average based on standard build optional equipment.
- Each Forest River RV is weighed at the manufacturing facility prior to shipping. A label identifying the unloaded vehicle weight of the actual unit and the cargo carrying capacity is applied to every Forest River RV prior to leaving our facility. The load capacity of your unit is designated by weight, net by volume, so you cannot necessarily use all available space when loading your unit.
- Actual towing capacity is dependent upon your particular loading and towing circumstances, which includes the GVW, GCWR and GWR as well as adequate trailer brakes. Please refer to the Operator’s Manual of your vehicle for further towing information. All information contained in this brochure is believed to be accurate at the time of publication. However, during the model year, it may be necessary to make revisions and confirm the existence of any materials, design or specifications that are material to your purchase decision. ©2020 Beyond by Coachmen, a Division of Forest River, Inc., Shakopee Minnesota company.
